

GROUP 12

Criteria	Weight	Score (on 5): 0) Non-existent 1) Insufficient 2) Less than adequate 3) Adequate 4) Good 5) Excellent 6) Exceeds expectations	Feedback (main points)
Entity-Relationship Model <i>The ERD captures the UoD and any hypotheses students may have postulated.</i>	8	4	- Des quais sans gare ? - Attributs dérivé num!séquence manquant dans la relation entre Trajet et Arrêt - Le trio de relation Exploite, Offre, Propose crée de la redondance qui demande des contraintes d'intégrités (un trajet n'est lié qu'à un service offert par une agence qui exploite l'itinéraire)
Domain descriptions <i>The domains of all attributes have been described. Domains may be further constrained in the section on non-visible integrity constraints.</i>	1	4.5	- Jour n'est pas une domaine définit
Integrity constraints not appearing in ERD <i>All integrity constraints that cannot be modeled with the ERD have been identified and described in sufficient detail.</i>	2	4	Beaucoup de bonnes contraintes (dont la contrainte sur Exploite, Offre, Propose) mais manques des contraintes sur les dates des exceptions
Keys <i>Based on the ERD developed by the students, students have correctly identified and written down the keys of entity sets and relationship sets.</i>	1	5	
Translation to the relational model <i>Based on the ERD developed by the students, students have correctly transformed their model into the (extended) relational model. Any changes concerning domains are also documented.</i>	6	4	L'attribut à valeurs multiples Jours n'est pas retranscrit et la relation Est_instance_de est dite absorbée mais ne l'est pas réellement et n'est donc pas retranscrite
Analysis of Normal Forms <i>All relations are in BCNF and justified. When a relation is not in BCNF, students explain why and/or apply the algorithm to decompose the relation. Any lost functional dependencies are documented.</i>	2	2.5	Décomposition pertinente pour Agence mais pourquoi n'avoir étudié que la moitié des relations ?
	Grade: (weighted avg) x 4	15.7
